Segmentation Overview

The analysis identified **6 distinct outlet segments** across **5,000 retail outlets**, representing a combined monthly VPO of **■18,008,281**.

Segment	Label	Outlets	% Total	Avg VPO (■)	Avg SKUs
0	Urban High-Footfall Daily Refreshment	775	15.5%	■7,896	18.8
1	Deep Rural Affordability GT	1,531	30.6%	■2,696	9.3
2	Urban Premium Modern Trade	144	2.9%	■5,968	17.1
3	Urban Kirana Everyday Essentials	1,918	38.4%	■2,543	12.3
4	Urban Transit Impulse GT	621	12.4%	■3,206	12.1
5	Metro High-Income Periphery GT	11	0.2%	■3,002	12.8

Store Prioritization — A/B/C/D & Upside Tagging

Tier	Description	Outlets	% Total	Avg Actual VPO	Avg Potential VPO	Avg Gap
A+	Top 20% by VPO — BELOW 75th-pct potential (highest intervention ROI)	309	6.4%	■6,448	■7,973	■1,525
A	Top 20% by VPO — performing at potential	681	13.6%	■12,735	■5,576	■-7,159
B+	Next 20% by VPO — BELOW 75th-pct potential	732	14.6%	■3,427	■5,240	■1,812
B	Next 20% by VPO — performing at potential	268	5.4%	■3,513	■2,416	■-1,097
C+	Next 30% by VPO — BELOW 75th-pct potential (emerging opportunity)	1,289	25.8%	■1,812	■3,422	■1,610
C	Next 30% by VPO — performing at potential	211	4.2%	■1,930	■1,368	■-562
D+	Bottom 30% by VPO — BELOW 75th-pct potential (underserved catchment)	1,401	28.1%	■720	■2,045	■1,325
D	Bottom 30% by VPO — performing at potential	94	1.9%	■783	■492	■-291

Strategic Prioritization Narrative

Perfect Store Prioritization: Unlocking Growth Potential Across the Indian Market

To maximize Net Sales Value (NSV) and margin, our Perfect Store program is evolving beyond simple VPO-based segmentation. By leveraging advanced analytics, we are now identifying not just our top-performing outlets, but also those with significant *untapped potential* – stores that, given their environment, should be generating substantially more revenue. This refined prioritization allows us to deploy our Go-To-Market (GTM) resources with surgical precision, driving targeted interventions that yield the highest commercial returns.

What Drives Outlet Potential in India?

Our quantile regression model, predicting the 75th percentile VPO, reveals clear drivers of outlet revenue potential in the Indian FMCG context. The strongest correlations are found with ****neighbourhood demographics**** (specifically higher SEC household counts and per-capita income), ****store size****, and crucially, ****proximity to commercial hubs**** such as offices, malls, and transport nodes.

This insight is critical for territory planning. It confirms that high-potential outlets are concentrated in areas with affluent catchments and significant footfall generators. Our GTM teams should prioritize mapping and activating these "hot zones," ensuring our distribution and Perfect Store execution standards are consistently superior in these commercially vibrant territories. This data-backed approach moves us beyond intuition, enabling us to proactively identify and invest in areas poised for growth, rather than solely reacting to historical sales.

High-Priority Intervention: A+ and B+ Stores

Our analysis highlights ****A+ and B+ stores**** as immediate, high-impact intervention targets. These outlets represent a unique opportunity: they are already performing well (top 40% by VPO), yet our model indicates they are significantly underperforming their environmental potential.

* ****A+ Stores (6.4% of outlets, ■1,525 average gap)****: These are our high-revenue champions (average actual VPO ■6,448) that still have substantial headroom (predicted potential ■7,973). The

gap here signifies a missed opportunity for premiumization and enhanced shopper experience. For these outlets, the foundation is strong, but execution is not yet "perfect." Interventions should focus on **execution upgrades**: optimizing planograms for maximum visibility, ensuring optimal chiller placement and stock levels for beverages, extending range to include relevant premium or new product development (NPD) SKUs from the Must-Stock List (MSL), and activating secondary displays to capture impulse purchases. These stores are ripe for a full Perfect Store compliance audit and targeted coaching for store owners.

*** B+ Stores (14.6% of outlets, 1,812 average gap)**: These are solid, good-revenue outlets (average actual VPO 3,427) with an even larger *relative* untapped potential (predicted 5,240). The significant gap suggests fundamental distribution or visibility issues. For B+ stores, the focus must be on **distribution fill and enhanced visibility**. This means aggressively pushing missing hero SKUs to ensure MSL compliance, implementing impactful merchandising and brand display (MBD) solutions, and ensuring these stores receive adequate, focused sales call frequency to drive category growth.

For both A+ and B+ stores, the underlying demand is proven. Our task is to close the execution gap, converting latent potential into realized NSV through precise, data-driven interventions.

Strategic Growth: C+ and D+ Stores

The C+ and D+ segments present a different, yet equally critical, growth opportunity.

*** C+ Stores (25.8% of outlets, 1,610 average gap)**: These are mid-revenue stores (actual VPO 1,812) in catchments that clearly support higher VPO (predicted potential 3,422). These are not structural low-performers; rather, they are **high-potential stores in underserved or under-activated catchments**. They represent a significant volume opportunity if we strategically invest. The field team should approach C+ stores with a focus on **foundational build and strategic investment**: this includes cooler seeding where viable, an aggressive MSL compliance push to ensure basic availability, and deploying essential Point-of-Sale Material (POSM) to drive awareness and trial.

*** D+ Stores (28.1% of outlets, 1,325 average gap)**: While currently low-revenue (actual VPO 720), these outlets also reside in environments that predict substantially higher VPO (predicted potential 2,045). Like C+ stores, these are **underperforming their environment**, indicating a significant opportunity for long-term growth. However, given their current low VPO, the approach must be more cost-effective. Field teams should focus on **trial activation and basic distribution**: introducing entry-price packs to drive penetration, ensuring availability of high-velocity basic SKUs, and leveraging simple awareness POSM. These stores might be best served through a distributor-led model or digital reordering to manage cost-to-serve.

Recommended Field Action Matrix

This refined prioritization demands a differentiated approach from our field sales teams:

*** A+ (High-Revenue, High-Potential)**: **Execution Upgrade & Premiumization**. Optimize planogram, ensure chiller availability/placement, range extension for premium/NPD, secondary display activation, Perfect Store compliance audits, and trade marketing support for key launches.

*** A (High-Revenue, At Potential)**: **Protect & Retain**. Maintain strong trade terms, ensure first-mover advantage on NPD, loyalty programs, strategic partnerships, and leverage for new product launches.

* **B+** (Good-Revenue, High-Potential): **Distribution Fill & Visibility.** Aggressively push missing hero SKUs (MSL compliance), implement impactful secondary displays, enhance Merchandising and Brand Display (MBD), and increase quality of sales calls focusing on category growth.

* **B** (Good-Revenue, At Potential): **Maintain Frequency & Seasonal Activation.** Consistent visit cadence, execute seasonal promotions, ensure basic MSL compliance, and enable digital reorder.

* **C+** (Mid-Revenue, High-Potential): **Strategic Investment & Foundational Build.** Cooler seeding (where viable), aggressive MSL compliance push, basic POSM deployment, trade marketing support, and sales rep coaching on category basics.

* **C** (Mid-Revenue, At Potential): **Efficiency & Digital Enablement.** Reduce cost-to-serve, promote digital reordering, ensure basic availability, and leverage distributor network for routine service.

* **D+** (Low-Revenue, High-Potential): **Trial Activation & Basic Distribution.** Introduce entry-price packs, ensure availability of high-velocity basic SKUs, simple awareness POSM, and explore distributor-led service models.

* **D** (Low-Revenue, Structural Low-Performer): **Rationalise & Lowest-Cost Service.** Reduce direct visit frequency, shift to distributor-only service, focus on digital ordering, minimal investment, and monitor for potential changes.

By adopting this nuanced, data-driven approach, we empower our GTM teams to focus their efforts where they will generate the greatest incremental NSV, ensuring our Perfect Store strategy delivers sustainable, profitable growth across the diverse Indian retail landscape.

Segment Deep Dives

Segment 0: Urban High-Footfall Daily Refreshment GT

These are established, small-format urban General Trade outlets, primarily kiranas, bakeries, and sweet shops. They serve a relatively affluent customer base with high cooler penetration, catering to daily refreshment and impulse purchases, often including premium products.

Outlets: 775 (15.5% of total) | **Avg VPO:** ■7,896/month | **Avg Total Rev:** ■87,343 | **Avg SKUs:** 18.8 | **Avg Active Months:** 10.8

Recommended Action: Optimize chiller planogram for premium and impulse SKUs, ensuring prominent placement and full range availability of high-margin beverage and snack items. Drive secondary display compliance for key brands.

Segment 1: Deep Rural Affordability GT

This is the largest cluster, comprising nascent, low-revenue rural kiranas focused purely on affordability. Shoppers are highly price-sensitive, seeking basic daily needs and impulse items, primarily in entry-level price points (Rs. 5/10).

Outlets: 1,531 (30.6% of total) | **Avg VPO:** ■2,696/month | **Avg Total Rev:** ■12,695 | **Avg SKUs:** 9.3 | **Avg Active Months:** 4.0

Recommended Action: Focus on ensuring 100% numeric distribution of core hero SKUs and entry-level Rs. 5/10 price-pack formats. Implement simple, high-visibility POSM for affordability messaging.

Segment 2: Urban Premium Modern Trade

These are larger, established Modern Trade grocery department stores in urban areas, characterized by 100% cooler availability and exclusive sales of premium categories. Shoppers engage in planned, higher-value purchases for household stock-up and indulgence.

Outlets: 144 (2.9% of total) | **Avg VPO:** ■5,968/month | **Avg Total Rev:** ■67,065 | **Avg SKUs:** 17.1 | **Avg Active Months:** 10.3

Recommended Action: Ensure planogram compliance for premium SKUs, focusing on full range availability and secondary displays for new product launches. Implement targeted promotions for multi-pack and larger formats.

Segment 3: Urban Kirana Everyday Essentials

This is a significant cluster of small urban kiranas, primarily serving everyday immediate consumption needs. While footfall is high, VPO is moderate, and premium sales are low, indicating a focus on core, affordable products.

Outlets: 1,918 (38.4% of total) | **Avg VPO:** ■2,543/month | **Avg Total Rev:** ■26,337 | **Avg SKUs:** 12.3 | **Avg Active Months:** 10.0

Recommended Action: Improve cooler penetration from 52% to 70% in high-potential outlets to drive chilled beverage sales. Implement a 'Must-Stock List' for core, high-turnover SKUs to maximize availability.

Segment 4: Urban Transit Impulse GT

This cluster consists of small urban GT outlets like paan kiosks, dairies, and tea shops, often near transit points. They cater to on-the-move shoppers seeking quick, affordable impulse purchases, with no premium category sales.

Outlets: 621 (12.4% of total) | **Avg VPO:** ■3,206/month | **Avg Total Rev:** ■33,581 | **Avg SKUs:** 12.1 | **Avg Active Months:** 9.9

Recommended Action: Prioritize counter-top displays and visible merchandising for single-serve, grab-and-go beverage and snack SKUs. Introduce combo offers (e.g., beverage + snack) at Rs. 20-30 price points.

Segment 5: Metro High-Income Periphery GT

Though small, this cluster represents high-footfall GT stores in the periphery of metros, serving an extremely high-income catchment. Shoppers likely seek convenience for daily top-ups and potentially premium items, despite the 'no premium' flag.

Outlets: 11 (0.2% of total) | **Avg VPO:** ■3,002/month | **Avg Total Rev:** ■33,669 | **Avg SKUs:** 12.8 | **Avg Active Months:** 10.9

Recommended Action: Conduct a deep dive into premium category sales potential, given the high-income demographic. Introduce aspirational SKUs and larger pack sizes suitable for household stock-up, leveraging the high footfall.
